

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently amended) Turning tool (5') for turning a jet regulator, a nozzle, an intermediate holder, a flow regulator, a non-return valve, or a similar plumbing fitting (5), wherein the fitting (5), on an opening side, is held detachably on a plumbing water outlet armature (2) by a screw connection or bayonet connection, wherein the turning tool (5') can be placed in a rotationally fixed manner on the plumbing fitting (5), the turning tool (5') comprising a plumbing fitting selected from the group consisting of: a jet regulator, a nozzle, an intermediate holder, a flow regulator, and a non-return valve, or as a component of a plumbing fitting and that the turning tool (5') can be placed in a rotationally fixed manner on an outer or inner periphery of the fitting (5) held on the water outlet armature (2) the turning tool (5') has a profiling (24, 25) or contouring on a face side, which can be placed in a rotationally fixed manner on a mating profiling or mating contouring (25, 24) provided on an outlet face of the fitting (5) held on the water outlet armature (2).
2. (Previously Presented) Turning tool according to Claim 1, wherein the turning tool (5') and the fitting (5) held detachably on the water outlet armature (2) have outer contours adapted to each other at least in sections, such that the turning tool and the fitting (5', 5) can be inserted one in one another in the sections and can be connected to each other in a rotationally fixed manner.

3. (Previously Presented) Turning tool according to Claim 1, wherein at least in an opening-side face region thereof, the fitting (5) held on the water outlet armature (2) has an outer outline or a clear inner opening, which is adapted in shape to a clear inner opening or to an outer outline of the turning tool (5'), such that the fitting and the turning tool (5', 5) can be inserted one in the other in this region in a rotationally fixed manner.

4. (Previously Presented) Turning tool according to Claim 1, wherein the turning tool (5') or the fitting held on the water outlet armature (2) has on an inner periphery thereof, at least in sections, a contouring or profiling, which can be placed in a rotationally fixed manner on a mating profiling or mating contouring when the other of the fitting and the turning tool is inserted therein.

5. (Currently amended) Turning tool according to Claim 1, wherein the turning tool (5') is constructed with a collar shape and is formed as a nozzle, an intermediate holder, or a housing of ~~[[a]]~~ the plumbing fitting.

6. (Previously Presented) Turning tool according to Claim 1, wherein the turning tool (5') is at least a component of a fitting that is identical in function and/or shape to the fitting (5) held on the water outlet armature.

7. (Previously Presented) Turning tool according to Claim 1, wherein the profilings (24, 25) or contourings that are provided on the face side on the turning tool (5') on one hand and on the fitting (5) held detachably on the water outlet armature (2) on the other hand and that can be placed one in the other in a rotationally fixed manner are constructed in a crown shape.

**Applicant:** Weis et al.  
**Application No.:** 10/532,251

8. (Previously Presented) Turning tool according to Claim 1, wherein the profilings (24, 25) or contourings provided on the turning tool (5') on one hand and on the fitting (5) held detachably on the water outlet armature (2) on the other hand are each provided on the outlet faces of the turning tool and the fixture (5', 5).

9. (Previously Presented) Turning tool according to Claim 1, wherein the turning tool (5') on one hand and the fitting (5) held detachably on the water outlet armature (2) on the other hand are each constructed as a jet regulator or at least as a component of a jet regulator.
